

Problem-Solution Fit

Date: 30 September 2026 | Team ID: 6ab2240ffc67a5bc0222524ef | Project: ComicCraft – AI Comic Story Creator

Problem-Solution Fit Canvas

Canvas area	ComicCraft-specific definition
1. Customer segments	Students, beginner storytellers, teachers/content creators, and casual users who want visual stories without manual comic production.
2. Problems / pains	Writing multiple panels, maintaining story flow, generating illustrations, and arranging a shareable final document take time and skills.
3. Triggers to act	A new story idea, classroom activity, creative assignment, social content concept, or desire to experiment with AI storytelling.
4. Customer limitations	Limited drawing skills, limited time, inconsistent design skills, and difficulty coordinating text with images.
5. Available solutions – pros/cons	Manual comic tools offer control but require more work; generic text generators create stories but do not provide a complete illustrated comic workflow.
6. Customer limitations	Users may have limited computing resources and image generation can take several minutes.
7. Behavior	Users prefer guided forms, presets and quick previews over complex authoring tools.
8. Channels	Web browser, project demonstration, classroom/project submission, and shared PDF output.
9. Root cause	Creative work is split across separate writing, image, layout and export tools.
10. Our solution	ComicCraft combines prompt collection, five-panel story structure, image generation, preview and PDF export in one workflow.

Fit statement

ComicCraft fits the problem because its workflow directly removes the coordination between story writing, illustration prompts, panel organization and document export while keeping a small set of user-controlled creative inputs.
