

Proposed Solution

Date: 30 September 2026 | Team ID: 6ab2240ffc67a5bc0222524ef | Project: ComicCraft – AI Comic Story Creator

Project proposal

Objective

Build a web application that converts a user's short creative idea into a five-panel illustrated comic, with configurable character, setting, tone and art style, followed by a browser preview and downloadable PDF.

Scope

In scope: prompt form, validation, five-panel outline, narration/dialogue, image generation, panel layout, HTML preview, JSON API route, image test route, and PDF export. Out of scope: user accounts, persistent project database, collaborative editing and cloud deployment configuration.

Core modules

Module	Responsibility
app/main.py	Create the FastAPI application, mount static files and include routes.
app/routes.py	Coordinate input handling and the end-to-end generation pipeline.
app/schemas.py	Validate request data.
services/gemini_flash.py	Create the structured five-panel outline in the packaged implementation.
services/gemini_pro.py	Create panel narration/dialogue in the packaged implementation.
services/image_generator.py	Generate and save panel images through Hugging Face.
services/layout_builder.py	Combine outline, story and image paths.
services/exporters.py	Build the final PDF.
templates/*	Collect input, display preview and show export success.

Expected result

A user can move from one story idea to a five-panel comic artifact through a single web workflow.
