

Coding & Solution

Date: 30 September 2026 | Team ID: 6ab2240ffc67a5bc0222524ef | Project: ComicCraft – AI Comic Story Creator

Solution summary

Field	ComicCraft details
Repository / package	Comic-Craft-main (submitted project package)
Programming language	Python
Framework	FastAPI + Jinja2
Validation	Pydantic v2
Image generation	Hugging Face InferenceClient using FLUX.1-schnell in image_generator.py
PDF generation	fpdf2
Frontend	HTML + CSS + Jinja2
API endpoints	/, /generate, /generate-comic/json, /export-success, /test-image

End-to-end implementation

The /generate route builds a PromptRequest, calls the internal generation pipeline, and renders comic_preview.html. The pipeline creates five outline panels, five story records, five image paths, a combined layout, and a PDF path. The JSON endpoint exposes the same generation workflow for API clients.

Important implementation note

The current packaged gemini_flash.py and gemini_pro.py contain deterministic/demo generators and explicitly state that they do not call Gemini. app/config.py still defines Gemini model settings, allowing a future live integration without changing the overall architecture. This documentation describes the packaged behavior rather than claiming an external API call that is not present in the submitted generator functions.
