

Communication

Date: 30 September 2026 | Team ID: 6ab2240ffc67a5bc0222524ef | Project: ComicCraft – AI Comic Story Creator

Communication plan

Audience	Key message	Evidence to show	Communication style
Evaluator	ComicCraft solves a complete creative workflow rather than only generating text.	Live form → five panels → PDF.	Clear and technical
Beginner user	You can create a comic from a short idea with a few choices.	Input form and preview.	Simple and visual
Developer	The code is modular and testable.	services/, routes.py, schemas.py, tests/.	Implementation-foc used
Project team	The architecture separates generation, layout and export.	Architecture and DFD.	Collaborative

Demo speaking sequence

Start with the user problem, introduce the five inputs, explain the generation pipeline, show the preview, then show the exported PDF. If external model credentials are unavailable, demonstrate the application structure and tests without claiming a live image-generation result.
