

Scalability & Future Plan

Date: 30 September 2026 | Team ID: 6ab2240ffc67a5bc0222524ef | Project: ComicCraft – AI Comic Story Creator

Scalability and future plan

Area	Current state	Future improvement
Text generation	Packaged modules provide deterministic/demo generation.	Integrate live Gemini API calls behind the same service interface.
Image generation	Five image-generation calls are performed for each comic.	Queue jobs, parallelize safely, cache results and show progress.
Persistence	Files are stored locally.	Add database-backed projects and user history.
Collaboration	Single-user workflow.	Add sharing, comments and collaborative editing.
Export	PDF output is generated locally.	Offer additional formats such as PNG/ZIP or print-ready layouts.
Quality	Basic structure and validation are implemented.	Add content consistency checks and image quality evaluation.
Deployment	Local Uvicorn workflow.	Containerize and deploy with managed storage and secret management.

Long-term vision

ComicCraft can evolve from a one-shot generator into a small creative workspace where users save projects, revise individual panels, regenerate selected images, and export multiple polished formats.
